

Increased visibility through data integration

Visibility into your fleet program helps you to better manage your drivers and vehicles. With U.S. Bank Voyager Application Programming Interfaces (APIs), you can increase your visibility with access to real-time data.

In addition to traditional batch files, Voyager APIs allow fleets to receive transactional data in real time for all fuel, maintenance and service purchases. This information can then be integrated with other details including those from telematics and other systems, giving you powerful and actionable insights into your fleet operations.

Contact U.S. Bank for more information

To learn more about Voyager APIs, contact your U.S. Bank Relationship Manager or follow these easy steps:

- Identify your internal technical resource
- Share technical resource contact details with your U.S. Bank Relationship Manager
- Have technical resource register and request access to Developer Portal at: <https://developer.usbank.com/>
